Symfony CLI version 5.16.1 (c) 2021-2026 Fabien Potencier (2025-11-25T07:30:20Z - stable)
Symfony CLI helps developers manage projects, from local code to remote infrastructure

These are common commands used in various situations:

Work on a project locally

local:new          Create a new Symfony project
local:server:start Run a local web server
local:server:stop  Stop the local web server
local:check:security Check security issues in project dependencies
composer           Runs Composer without memory limit
console            Runs the Symfony Console (bin/console) for current project
php, pecl, pear, php-fpm, php-cgi, php-config, phpdbg, phpzice, pie  Runs the named binary using the configured PHP version

Manage a project on Cloud

project:init        Initialize a new project using templates
cloud:domain:list   Get a list of all domains
cloud:environment:branch Branch an environment
cloud:environment:list Get a list of environments
cloud:environment:push Push code to an environment
cloud:environment:ssh SSH to the current environment
cloud:project:list   Get a list of all active projects
cloud:tunnel:open    Open SSH tunnels to an app's relationships
cloud:user:add       Add a user to the project
cloud:variable:list  List variables

Show all commands with symfony.exe help,
Get help for a specific command with symfony.exe help COMMAND.

● PS C:\Users\alex\slam> symfony check:requirements

Symfony Requirements Checker
~~~~~
> PHP is using the following php.ini file:
C:\xampp\php\php.ini

> Checking Symfony requirements:
.....Ww.....W..

[OK]
Your system is ready to run Symfony projects

Optional recommendations to improve your setup
~~~~~

* intl extension should be available
  > Install and enable the intl extension (used for validators).

* a PHP accelerator should be installed
  > Install and/or enable a PHP accelerator (highly recommended).

* realpath_cache_size should be at least 5M in php.ini
  > Setting "realpath_cache_size" to e.g. "5242880" or "5M" in
  > php.ini* may improve performance on Windows significantly in some
  > cases.

* "post_max_size" should be greater than "upload_max_filesize".
  > Set "post_max_size" to be greater than "upload_max_filesize".

Note The command console can use a different php.ini file
      than the one used by your web server.
      Please check that both the console and the web server
      are using the same PHP version and configuration.

```

```
[PS C:\Users\alexim\slam> symfony new biblios --version="7.0.*" --webapp
* Creating a new Symfony 7.0.* project with composer
* Setting up the project under GIT version control
  (running git init C:\Users\alexim\slam\biblios)
./composer.json has been updated
No lock file found, running composer pack
Loading composer repositories with package information
Restricting packages listed in "symfony/symfony" to "7.0.*"
Updating dependencies
Your requirements could not be resolved to an installable set of packages.

  Problem 1
    Root composer.json requires symfony/runtime "7.0.*", found symfony/runtime[v7.0.0, v7.0.3, v7.0.7, v7.0.8] but these were not loaded, because they are affected by security advisories ("MSA-dirr-z8h-qm"). Go to https://packagist.org/security-advisories/
  o [find security details, to ignore the advisories, and then to the audit "ignore" config. To turn the feature off entirely, you can set "block-insecure" to false in your "audit" config.
    Problem 1
      - root composer.json requires symfony/runtime "7.0.*" provided by symfony/runtime[v7.0.0, ..., v7.0.8]
        - root composer.json requires symfony/http-foundation "7.0.*" provided by symfony/http-foundation[v7.0.0, ..., v7.0.8] but these were not loaded, because they are affected by security advisories ("MSA-365x-223-k-pq7", "MSA-b35n-56h-rs4q"). Go to https://packagist.org/security-advisories/ to find advisory details. To ignore the advisories, add them to the audit "ignore" config. To turn the feature off entirely, you can set "block-insecure" to false in your "audit" config.

Installation failed, reverting ./composer.json and ./composer.lock to their original content.

  Unable to run C:\xampp\php\php.exe C:\Users\alexim\slam\composer.phar require debug --no-interaction

PS C:\Users\valentim\babylon> symfony console list
Symfony 7.0.3 (env: dev, debug: true)

Usage:
  Command [options] [arguments]

Options:
  -h, --help      Display help for the given command. When no command is given display help for the list command
  -q, --quiet     Do not output any message
  -V, --version   Show the version (or disable --no-ansi) ANSI output
  -n, --no-interaction  Do not ask any interactive question
  -e, --env        The environment (default: "dev")
  -d, --debug     Switch off debug mode
  -profile      Enables profiling (requires debug).
  -vvv|vvvv|...|--verbose  Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for debug

Available commands:
  assets           Display information about the current project
  assets:cache    Dump the shell completion script
  assets:clean    Help
  assets:help     List commands
  assets:install  Install bundle's web assets under a public directory
  assets:migrate  Copy all mapped assets and writes them to the final public output directory
  assets:remove   Remove
  assets:setup    Install
  cache:clear     Clear the cache
  cache:pool:clear  Clear cache pools
  cache:pool:create  Create a cache pool
  cache:pool:invalidate-tags  Invalidate cache tags for all or a specific pool
  cache:pool:list   List available cache pools
  cache:pool:prune  Purge
  cache:warmup    Warm up an empty cache
  config          Dump the default configuration for an extension
  debug:config-dump-reference  Reference
  dial            Executes arbitrary SQL directly from the command line.
  dial:run:sql    Executes
  debug:asset:map  Output all mapped assets
  debug:autowiring  List classes/interfaces you can use for autowiring
  debug:bootstrap  Dump the bootstrap configuration for an extension
  debug:controller  Displays current services for an application
  debug:dotenv    List all .env files with variables and values
  debug:environment  List environment variables for the current application
  debug:firewall  Display information about your security firewall(s)
  debug:form     Display form type information
  debug:logger    List registered log channels using the message buses
  debug:router    Display current routes for an application
  debug:service:finder  Displays inheritance information for classes
  debug:translation  Display localization messages information
  debug:validation  Show a list of twig functions, filters, globals and tests
  debug:validator  Display validation constraints for classes
  doctrine:cache:clear-collection-region  Clear a second-level cache collection region
```

```

PS C:\Users\alex\slam\biblio> symfony console list
make:auth          Create a Guard authenticator of different flavors
make:command       Create a new console command class
make:controller   Create a new controller class
make:crud          Create CRUD for Doctrine entity class
make:docker:database Add a database container to your compose.yaml file
make:entity         Create or update a Doctrine entity class, and optionally an API Platform resource
make:fixtures      Create a new class to load Doctrine fixtures
make:form          Create a new form class
make:listener      [make:subscriber] Creates a new event subscriber class or a new event listener class
make:message       Create a new message and handler
make:messenger-middleware Create a new messenger middleware
make:migration     Create a new migration based on database changes
make:registration-form Create a new registration form system
make:reset-password Create controller, entity, and repositories for use with symfonycasts/reset-password-bundle
make:schedule      Create a scheduler component
make:security:custom Create a custom security authenticator.
make:security:form-login Generate the code needed for the form_login authenticator
make:serializer:encoder Create a new serializer encoder class
make:serializer:normalizer Create a new serializer normalizer class
make:stimulus-controller Create a new Stimulus controller
make:test          [make:unit-test|make:functional-test] Create a new test class
make:twig-component Create a Twig (or Live) component
make:twig-extension Create a new Twig extension with its runtime class
make:user          Create a new security user class
make:validator    Create a new validator and constraint class
make:voter         Create a new security voter class
make:webhook       Create a new Webhook
messenger
  messenger:consume Consume messages
  messenger:failed:remove Remove given messages from the failure transport
  messenger:failed:retry Retry one or more messages from the failure transport
  messenger:failed:show Show one or more messages from the failure transport
  messenger:setup-transports Prepare the required infrastructure for the transport
  messenger:stats Show the message count for one or more transports
  messenger:stop-workers Stop workers after their current message
router
  router:match    Help debug routes by simulating a path info match
secrets
  secrets:decrypt-to-local Decrypt all secrets and stores them in the local vault
  secrets:encrypt-from-local Encrypt all local secrets to the vault
  secrets:generate-keys Generate new encryption keys
  secrets:list      List all secrets
  secrets:remove    Remove a secret from the vault
  secrets:set       Set a secret in the vault
security
  security:hash-password Hash a user password
server
  server:dump      Start a dump server that collects and displays dumps in a single place
  server:log       Start a log server that displays logs in real time
translation
  translation:extract Extract missing translations keys from code to translation files
  translation:pull Pull translations from a given provider.
  translation:push Push translations to a given provider.

```

```

● PS C:\Users\alex\slam\biblio> symfony console list make
Symfony 7.0.10 (env: dev, debug: true)

Usage:
  command [options] [arguments]

Options:
  -h, --help           Display help for the given command. When no command is given display help for the list command
  -q, --quiet          Do not output any message
  -V, --version        Display this application version
  --ansi|-no-ansi     Force (or disable --no-ansi) ANSI output
  -n, --no-interaction Do not ask any interactive question
  -e, --env=ENV        The Environment name. [default: "dev"]
  --no-debug          Switch off debug mode.
  --profile           Enables profiling (requires debug).
  -v[vv|vvv, --verbose Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for debug

Available commands for the "make" namespace:
make:auth          Create a Guard authenticator of different flavors
make:command       Create a new console command class
make:controller   Create a new controller class
make:crud          Create CRUD for Doctrine entity class
make:docker:database Add a database container to your compose.yaml file
make:entity         Create or update a Doctrine entity class, and optionally an API Platform resource
make:fixtures      Create a new class to load Doctrine fixtures
make:form          Create a new form class
make:functional-test Create a new test class
make:listener      [make:subscriber] Creates a new event subscriber class or a new event listener class
make:message       Create a new message and handler
make:messenger-middleware Create a new messenger middleware
make:migration     Create a new migration based on database changes
make:registration-form Create a new registration form system
make:reset-password Create controller, entity, and repositories for use with symfonycasts/reset-password-bundle
make:schedule      Create a scheduler component
make:security:custom Create a custom security authenticator.
make:security:form-login Generate the code needed for the form_login authenticator
make:serializer:encoder Create a new serializer encoder class
make:serializer:normalizer Create a new serializer normalizer class
make:stimulus-controller Create a new Stimulus controller
make:subscriber    Creates a new event subscriber class or a new event listener class
make:test          [make:unit-test|make:functional-test] Create a new test class
make:twig-component Create a Twig (or Live) component
make:twig-extension Create a new Twig extension with its runtime class
make:user          Create a new security user class
make:validator    Create a new validator and constraint class
make:voter         Create a new security voter class
make:webhook       Create a new Webhook

```

```

PS C:\Users\alexi\slam\biblios> symfony console make:controller

Choose a name for your controller class (e.g. FierceGnomeController):
> Awesome

Do you want to generate PHPUnit tests? [Experimental] (yes/no) [no]:
> no

created: src/Controller/AwesomeController.php
created: templates/awesome/index.html.twig

Success!

Next: Open your new controller class and add some pages!
○ PS C:\Users\alexi\slam\biblios>

```

- PS C:\Users\alexi\slam\biblios> symfony console make:controller
 

```

Choose a name for your controller class (e.g. DeliciousGnomeController):
> MainController

Do you want to generate PHPUnit tests? [Experimental] (yes/no) [no]:
> no

created: src/Controller/MainController.php
created: templates/main/index.html.twig

Success!

Next: Open your new controller class and add some pages!

```
- PS C:\Users\alexi\slam\biblios> symfony console make:controller
 

```

Choose a name for your controller class (e.g. OrangeElephantController):
> DefaultController

Do you want to generate PHPUnit tests? [Experimental] (yes/no) [no]:
> no

created: src/Controller/DefaultController.php
created: templates/default/index.html.twig

Success!

Next: Open your new controller class and add some pages!

```
